DETAILED ACTION

1. The drawings filed 2-21-2004 are acceptable.
2. The title should be amended to reflect the invention of this divisional application.
3. The abstract should also be rewritten to reflect the invention of this divisional application.
4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Pfaffmann et al (US 5,025,123).

Pfaffmann shows a method of sealing a foil cap to the opening of a container comprising the following steps: providing a sealing head assembly 500 having an air-cooled inductor 560 disposed adjacent to a magnetic flux concentrator (not shown but see col. 13, lines 38-41); providing an ac current to the air-cooled inductor (see claim 3, col. 18, line 64-66) from a power supply located remotely from the sealing head assembly (see Figures 8 and 9) to generate a magnetic field in the air-cooled inductor, the magnetic field creating heat primarily in the non-water cooled, air-cooled inductor and the magnetic flux concentrator; and transferring

the heat from the sealing head assembly by a non-forced air convection means (see Figures 1-7, col. 3, lines 9-37; col. 4, lines 16-27; col. 13, lines 1-22 and col. 18, lines 64-66). Clearly, the air cooling in Pfaffmann is non-forced only as it does not show any forced convection devices, such as pumps or fans and explicitly states "without a circulated coolant" at col. 13, line 22.

6. Claims 4 and 5 are allowed.

7. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

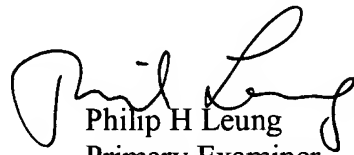

Ishibashi et al (US 4,508,481) and Buckley et al (US 4,521,659) are further cited to show induction sealing devices with various cooling methods.
